Sr. Software Engineer

Hiring organization
Elite Exceed

Employment Type
Full-time

Job Location
Beaverton, Oregon, USA

Description

The Digital Engineering Customization Capability team is looking for a Senior Software Engineer to join our team. We are responsible for the technology solutions that allow consumers to design their own custom footwear and apparel. Beyond serving our most loyal consumers, we empower partner teams that help bring customization experiences to life across all of the global eCommerce channels. In this role you will get to touch all of the critical web experiences that bring customization to life.

Responsibilities

- Participating in a high functioning DevOps Scrum team, employing various XP practices
- Developing the tools and processes used across Digital Engineering to increase speed of software delivery while reducing the cost of implementation
- Designing, developing, debugging, and testing full stack capabilities eCommerce applications, inclusive of UX, frameworks, and APIs that deliver secure, reliable, maintainable, highly available, and performant web experiences
- Building observable code that helps inform data driven decisions
- Working in a continuous delivery model; deploying experiences frequently at large scaleto a global audience of consumers
- Providing technical leadership and knowledge to your teammates
- Consulting and performing engineering support, problem solving, and issue resolution with internal and external resources
- Partnering with, working in and across multiple teams to deliver customization experiences

Qualifications

- 5+ years of software development experience
- Diverse experience in Web Based Software development, including React, Redux, HTML, CSS, JavaScript, Node, Microservice Architecture, REST / GraphQL, Express
- Experience with high-performance graphical experiences
- Experience with 3D technologies a plus (WebGL, Babylon.js, three.js, etc.)
- Experience in designing and implementing highly scalable web applications
- Experience working in a Distributed/Cloud-based environment (e.g. Amazon EC2, GCE, Rackspace, Azure, etc.). AWS preferred.
- Experience delivering software using an agile development process (Scrum preferred)

- Experience with modern build strategies, continuous integration, unit testing, static analysis, integration testing experience
- Experience working with relational and NoSQL databases preferred (e.g. Aurora, Dynamo).
